

Final Business Insights Report

Overview

This project analyzed sales, profit, customer, and product performance data using Excel, SQL, and Power BI. The objective was to identify key business trends, top-performing products, profitable customer segments, and opportunities for business improvement.

Key Performance Indicators (KPIs)

- Total Sales: 13M
- Total Profit: 1.47M
- Total Orders: 25K
- Average Discount: 14.29%

These KPIs indicate strong revenue generation and healthy profitability across the business.

Regional Performance Analysis

Region-wise sales analysis revealed that the Central region generated the highest sales revenue, making it the strongest performing market. The Canada region recorded the lowest sales and may require additional marketing and sales initiatives to improve performance.

Product Performance Analysis

The Cisco TelePresence System EX90 Videoconferencing Unit generated the highest sales revenue, making it the top-selling product.

However, the most profitable product was Bush Classic Bookcase, Traditional. This highlights that high sales revenue does not always result in the highest profit, as profitability is influenced by product costs, discounts, and margins.

Category and Sub-Category Analysis

Analysis of product categories and sub-categories identified the most profitable business segments. These categories contribute significantly to overall profitability and should be prioritized for inventory planning and promotional strategies. Most profitable category is 'Technology'.

Customer Analysis

The Top 10 Customers generated a substantial portion of total sales revenue. Retaining these high-value customers through loyalty programs and personalized engagement could help drive future revenue growth.

Monthly Sales Trend

Final Business Insights Report

Monthly sales trend analysis was performed to evaluate business performance over time. The trend helps identify seasonality, demand patterns, and growth opportunities that support strategic planning and forecasting.

Discount Analysis

The average discount offered across orders was 14.29%. While discounts can support sales growth, excessive discounting may reduce profit margins. Regular monitoring of discount strategies is recommended.

Recommendations

1. Focus on expanding sales in high-performing regions such as Central.
2. Develop improvement strategies for lower-performing regions.
3. Promote highly profitable products and categories.
4. Strengthen relationships with top customers through retention programs.
5. Monitor discount levels to balance revenue growth and profitability.
6. Use monthly sales trends for demand forecasting and inventory planning.

Conclusion

The analysis provided valuable insights into sales performance, profitability, customer behaviour, and regional trends. These findings can support data-driven decision-making and help improve overall business performance.
